# Dental Implant Planning

Take your implant placement to a new level of precision with CBCT technology and virtual implant planning. There are many challenges when integrating this progressive technology into today's busy practice. During the past few years, ROE Dental Laboratory has developed a complete turn-key planning solution for you.

Our full service approach will manage an implant case from preliminary treatment discussion through final restoration.

ROE is an experienced, licensed provider of the above four softwares. We use this planning software to preplan cases and host live-on line meetings to modify and finalize plans, saving you time and expense. With quick turnaround, video conferencing, eConsult communication, and a knowledgeable support team, your time, productivity, and predictability will be maximized.
