

# DIGITAL SMILE DESIGN

Let ROE Create A World-Class Smile for Your Patient

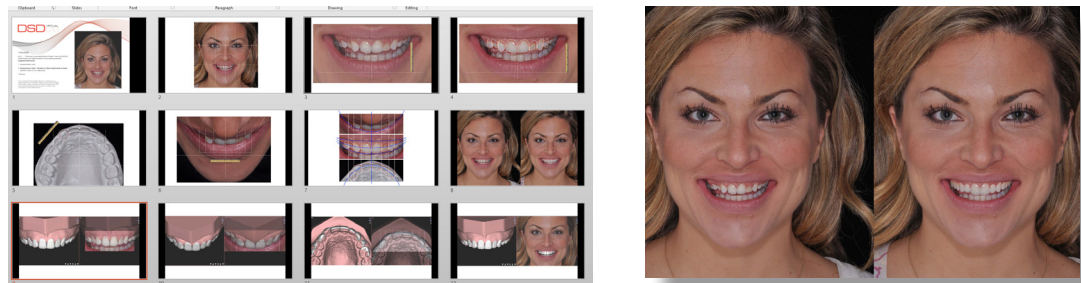

Digital Smile Design (DSD) has taken the world by storm with an amazing system for designing a smile that for the first time allows a case plan with 2D photographs to transfer directly into a 3D rendering. DSD can fundamentally changed the way a patient visualizes their new smile in your practice, from a functional, esthetic and visual aspect. Patients' lives change with a smile makeover. DSD is the tool to take them there, and it is design for doctors by doctors.

We offer very simple steps to achieving the DSD experience. There are two options.

**Step 1 - Send ROE** 5 specific photos . max/man models, or digital impression, and your initial treatment plan notes

**Step 2 - Receive** - a 2D / 3D treatment plan for approval of discussion / modification

**Step 3 - Receive** - the 3D model for the proposed treatment, with the dual laminate matrix for temporaries and or in-office DSD mock-up

**Fee \$430**

**THE WORLD LEADER IN DIGITAL SMILE DESIGN**
