

Quick Steps - Hybrid Denture & TLZ-IB Prettau Bridge

Office Steps

Laboratory Steps

We are here to support you throughout the process of creating a Hybrid or TLZ-IB Prettau Bridge.

One item that must be discussed is transmucosal abutments. If they are not present at the time of implant placement or master impressions, we will call you to discuss their use. These abutments correct screw angulation so the screw accesses are in ideal locations. If you are not familiar with transmucosal abutments, please call for further information.
