

Technology delivers digitally produced dentures with unparalleled accuracy

Let ROE impact your practice with 2-appointment, reproducible, high quality, affordable IMPACT digital dentures. From traditional bite blocks, or digital impressions, our 3D printed dentures eliminate set-up appointments, are extremely accurate, at a lower cost and quicker turnaround time.

Bite Block to Final

Order the final denture from bite blocks or master casts (immediates). ROE digitizes your records and fabricates final IMPACT dentures. If the bite is off by more than just an equilibration, simply take a new bite and we'll perform our Reverse Reset where we will fabricate a new denture for a lower cost.

1. Capture records

Capture well-marked bite block(s) showing midline, cuspid lines, high smile line, and bite, or cast for immediates.

2. Seat the final denture(s)

Adjust the bite to comfort, or capture a new bite and return for a new final (Reverse Reset).
