

Let ROE impact your practice with reproducible, high quality, affordable digital dentures.

You don't need digital impressions to order a digital denture. From traditional bite blocks, or digital impressions for immediates, our 3D printed IMPACT™ and milled Ivotion™ dentures eliminate set-up appointments, are extremely accurate, and offer a lower cost and quicker turnaround time than traditional dentures.

How to Get Started

1. Capture models and send a centric tray or well-marked bite block(s) showing midline, cuspid lines, high smile line, and bite, or casts for immediates.

A photograph of patient with bite block is required for a more accurate setup. ROE is happy to provide bite block(s) if needed.

2. Call for pick-up or download UPS label from www.roedentallab.com/UPS and ship to ROE.
3. Printed monolithic try-in (optional in some cases).
4. Seat final digital denture.

Ivotion™ Digital Denture

Ivotion milled digital dentures are a significant breakthrough in the world of digital dentures. Digitally designed and milled from a single bicolor puck, the Ivotion denture is a maximum strength denture with life-like esthetics.

IMPACT™ Digital Denture

ROE has designed and created over 12K IMPACT digital dentures in the last five years. Order the final IMPACT denture from bite blocks or master casts (immediates). ROE digitizes the records and fabricates final dentures. ROE stores all digital records and can simply make a new denture from a phone call.

What is an IMPACT Reverse Reset?

If an IMPACT denture is not able to be equilibrated to satisfaction, and is returned with a new bite, ROE fabricates a new denture at a lower cost.
