

Affordable, Non-Invasive, Comfortable

Snap-On Smile® is a non-invasive, cosmetic, removable appliance that literally snaps over existing dentition without adhesives... and without impinging on gingival tissue.

The patented, transitional, taper design is contact lens-thin in the anterior and provides increased strength in the posterior, where needed. The specialized medical-grade resin is flexible, comfortable, and natural-looking. Patients can wear it all day, every day!

A Snap-On Smile can be indicated for either or both arches of any patient lacking confidence in his or her smile for the following reasons:

- Missing teeth
- Uneven spacing
- Irregularly sized or shaped, yet otherwise healthy teeth
- Discolored teeth
- Collapsed vertical dimension

Chairtime is minimal - diagnose and deliver in just two short appointments. It's backed by a 3-month warranty, with an optional extension to 12 or 36 months, so you can prescribe Snap-On Smile with total confidence.

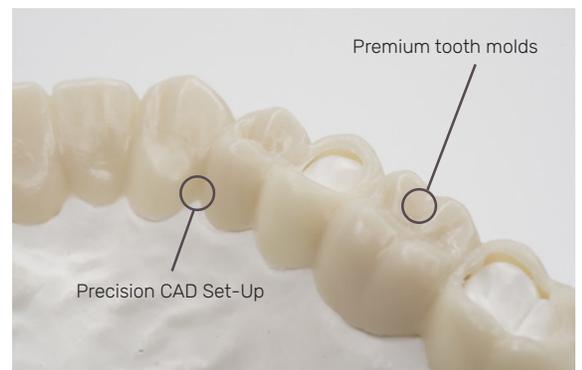

1. Capture records

Send upper and lower master casts and bite registration. Study casts and photographs are also helpful.

2. Seat Smile

Seat the patient's custom Snap-On Smile.
